

The Core
Model: Create
great content in
collaboration

Netlife

Why isn't my department in the main menu?

I need a banner for our latest product launch.

We need a button on the home page that takes you to our Facebook profile.

My son could have made a better website.

How come our annual report isn't on the home page?

Somebody called me last week and couldn't find vacant positions!

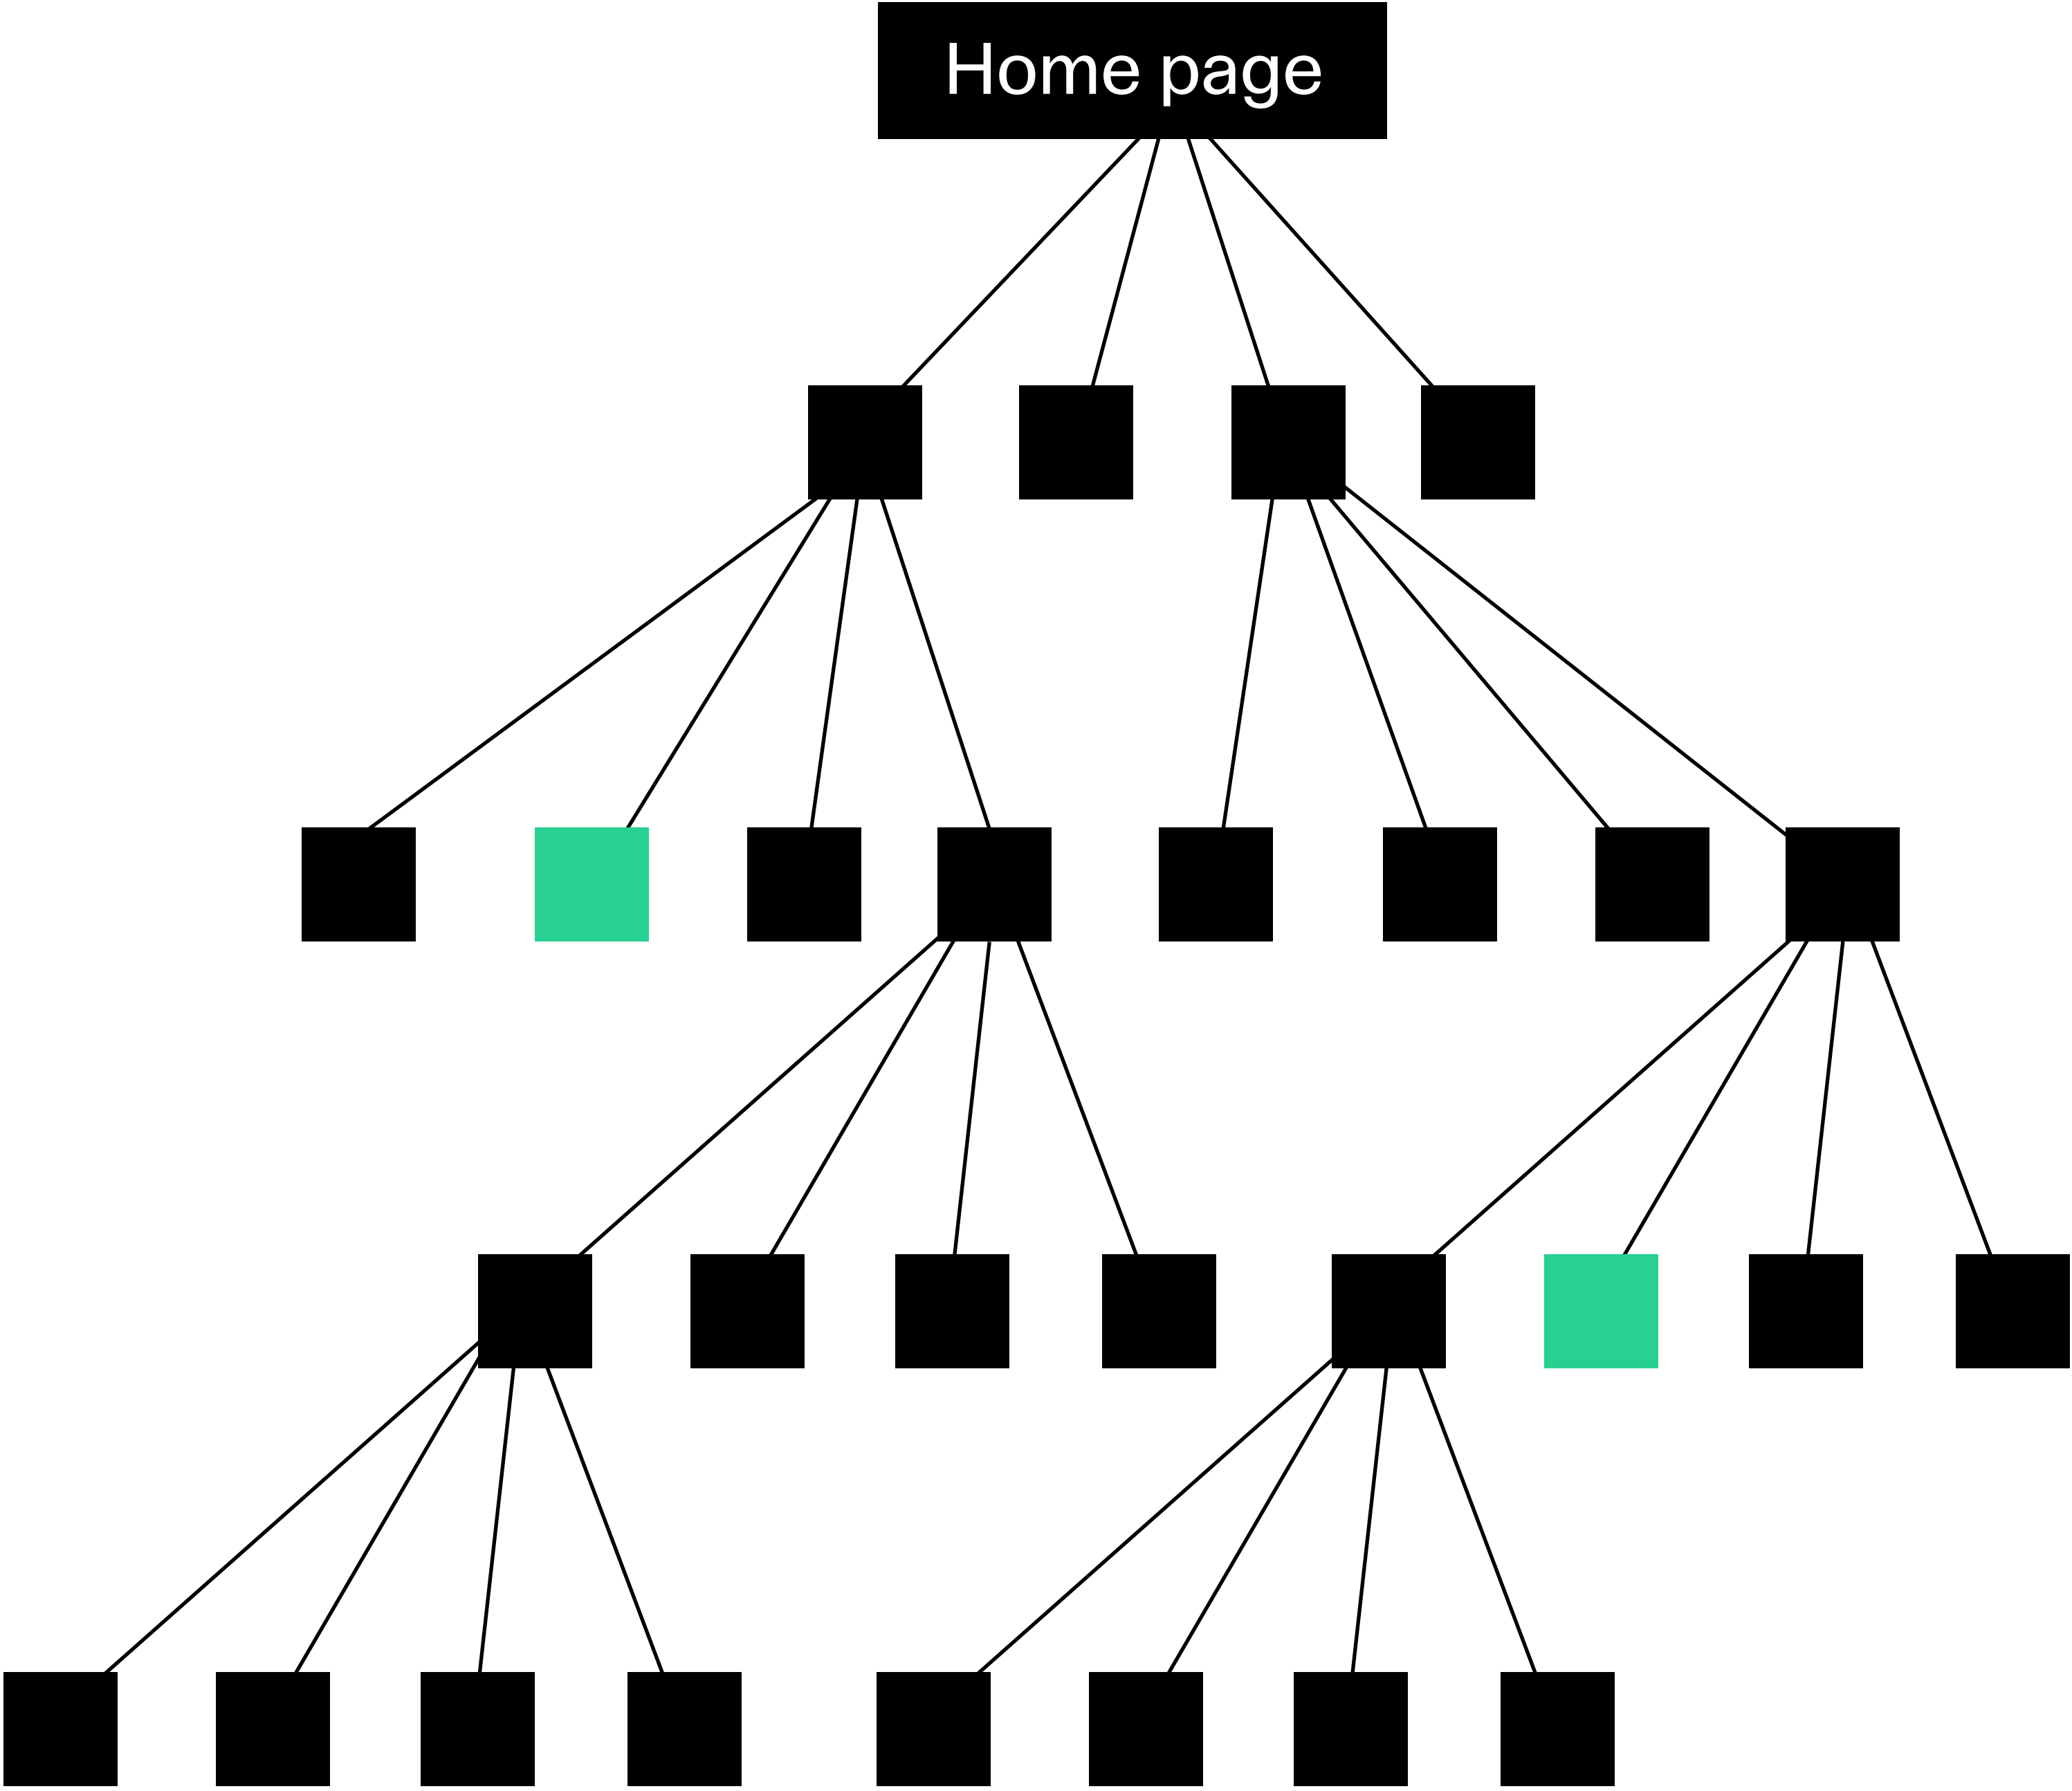

You should make more room for news.

I don't like purple!!

Make cores,
not wars

Many users will never
see any other page

Main conference presentation

Core+Paths - A design framework for findability

Are Halland, Mona Halland

Saturday March 24 2007, 5:00 - 5:45PM

We believe that our traditional sitemaps, flows and wireframes tend to ignore some of the most important aspects of findability, simplicity, prioritization and persuasion:

- We create "empty structures", leaving content to be "filled in" by others
- We focus on front and section pages, whereas 50% of users enter from Google
- We forget about SEO, marketing and other key aspects of findability
- We miss out on opportunities to solve business goals through Calls to Action
- We end up making huge websites plagued by navigation and information overload

Instead of creating hollow information structures, we believe that true findability needs to be designed from the inside and out. We need to start with the findable object itself, and focus on the Core content and functionality that will fulfil user needs as well as business problems.

In this presentation we will outline a design framework for thinking about websites and applications in terms of findable objects - Core pages or Core flows - and Inward and Outward Paths to and from these. Through focusing on Core and Paths the project team, the client and other stakeholders are "forced" to prioritize and simplify content and navigation – thus greatly improving findability and usefulness of the final result.

The Core Model: Designing Inside Out for Better Results

by **IDA AALEN** · January 06, 2015

Published in [Content Strategy](#), [Workflow & Tools](#), [Information Architecture](#) · [30 Comments](#)

If you've worked on a website design with a large team or client, chances are good you've spent some time debating (arguing?) with each other about what the homepage should look like, or which department gets to be in the top-level navigation—perhaps forgetting that many of the site's visitors might never even see the homepage if they land there via search.

Do your user
research

And establish
business goals

What you need

- Handouts with the core model (A3)
- Handouts with objectives and user needs
- Markers and post-its
- Room with a projector
- 3-4 hours per workshop
- 1-3 participants from the digital/web team
- 6-14 stakeholders/people from the client
- Snacks and lots of coffee!

6-14 participants

No design or content skills
necessary!

- facilitator (you!)
- your team: design, UX, content
- people with expert knowledge
- content owners
- people who should be collaborating, but aren't
- people with strong opinions about the website

Core workshop

People work in pairs,
and present their work
after each step

1. Identify core pages
2. Inward paths
3. Core content
4. Forward paths
5. Prioritize core elements

Core page: _____

Business goals (achieve at least one)

.....

.....

.....

.....

User tasks

.....

.....

.....

.....

Inward paths

Core content

Cancer care

Step #1

Identify your core pages

This is done by matching
business goals and user needs

The Norwegian Cancer Society's goals

1. Helping patients and their friends and family
2. Increasing knowledge about cancer and prevention
3. Increasing online self-service
4. Strengthening our position and increasing donations

Top task survey

«If you're visiting The Cancer Society's website, which five tasks are the most important to you?»

Core page: Form of cancer (example: "lung cancer")

Business goals (achieve at least one)

Help patients and their friends and family

Increase knowledge about cancer & prevention

User tasks

Treatment of cancer

Symptoms of cancer

Preventing cancer

Cancer types

Inward paths

Core content

Forward paths

Step #2

Inward paths

How will the user get here?

How will they find this content?

Core page: _____

Business goals (achieve at least one)

User tasks

.....

.....

.....

About Cancer Society

- Cool or knot that is felt in the chest
- Hollow in the skin of the breast
- Nipple that draws inward or pointing in different direction than usual
- Weeping from the nipple, especially if the liquid contains blood
- Cool in the armpit or neck
- Wounds that do not heal
- Pain in the breast
- Eczema, redness with increased heat or other skin changes in the breast or nipple

A number of women have from time to time weeping from the nipple. This applies particularly middle-aged women. The fluid may be clear or yellow, milky, brown, yellow-green or bloody obvious.

If weeping due to breast cancer, it will often be bloody. If you get **bloody**

Weeping from the nipple

A number of women have from time to time weeping from the nipple. This applies particularly middle-aged women. The fluid may be clear or yellow, milky, brown, yellow-green or bloody obvious.

If weeping due to breast cancer, it will often be bloody. If you get **bloody weeping** from the nipple, it is important to visit your doctor to examine your chest. Weeping from the nipple may well be due to benign conditions, such as the use of certain drugs.

During lactation, especially at first, experiencing many streaks of blood in milk. This is harmless and need no special examination.

Changes in the shape of the breast or skin

For breast to breast **change shape**, for example, can cause **hollow** in the skin of the breast. This is best discovered by looking in the mirror with your arms raised above your head. It may also happen that **the nipple retracts or pointing in a different direction** than usual.

Breast cancer can also cause **eczema changes** on or around the nipple, such as orange peel-like skin surface or **sores** on the skin of the breast that does not heal.

Any such symptoms should be examined by a physician considering breast cancer.

Symptoms mentioned above can be signs of cancer, but it can also be signs of other conditions. Cancer Society's advice is that if the symptoms last for more than three weeks, you should consult your doctor.

more than three weeks, you should consult your doctor.

Causes and Prevention

Breast gland tissue is from puberty under the constant influence of female sex hormones - estrogens. These play an important role in the development of breast cancer.

Otherwise it with current knowledge difficult to point directly causes the disease.

There are, however, knowledge of the factors that can increase and which can reduce the risk.

Factors that may increase the risk of breast cancer

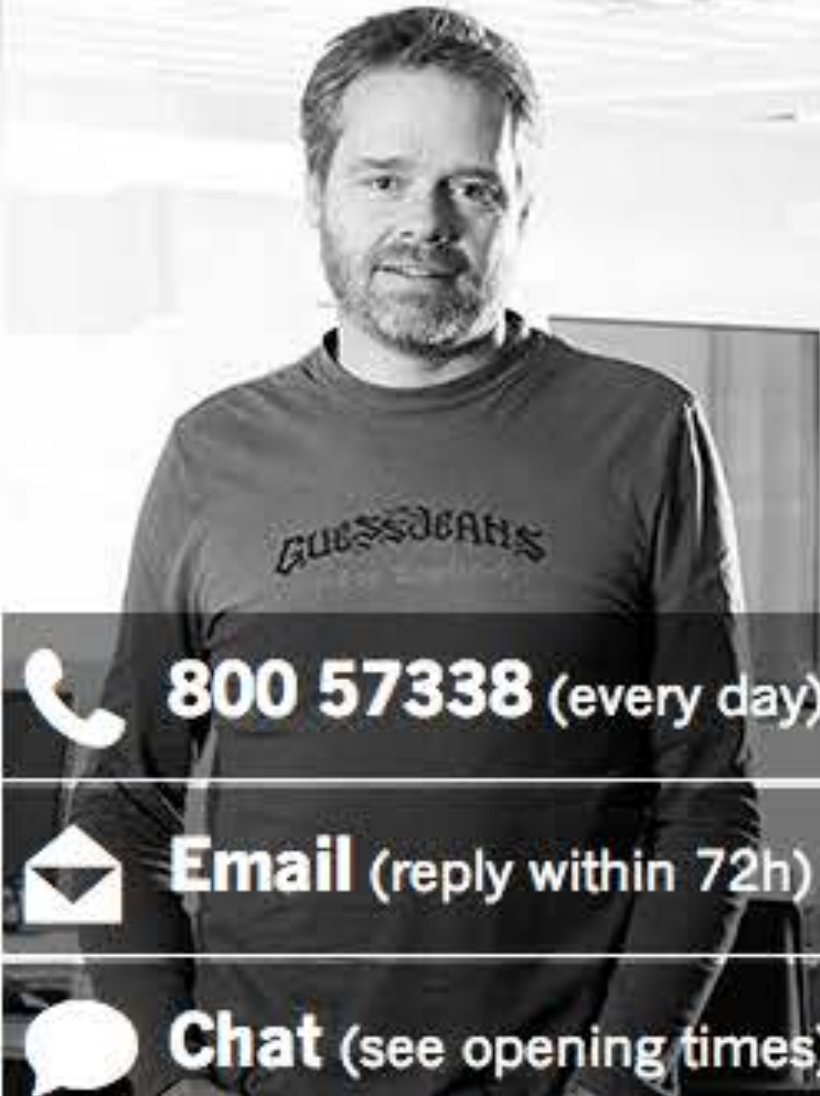

- Early menarche and late menopause, ie a high number of menstrual periods
- To bear children
- To bear children until after the age of 35 years
- Inactivity
- Overweight
- Alcohol , the risk increases with the intake
- Prior radiation therapy to the breast
- Long-term use of estrogen supplements in conjunction with menopause

Factors that may reduce the risk of breast cancer

- Giving birth to their first child before age 25 years
- Giving birth to more children
- To breastfeed

Diet and physical activity are also of importance for the development of breast cancer.
